

# DC 830 TMP

Color coded label comes in three colors, blue = detergent, red = acid, yellow = chlorine

Name of chemical listed in both English and Spanish

- Unit has been used for over ten years as a laundry dispenser
- This unit is designed to be used either manually or triggered by a wash controller or a laundry machine
- The 60 RPM pump will deliver 22 ounces per minute of chemical and the 105 RPM pump will deliver 38 ounces per minute, there is no extra charge for the 105 RPM pump
- Programming allows for delay of chemical for up to 4 minutes and 15 seconds, the maximum running time per event is 4 minutes and 15 second and the lock out time can be 75 minutes. The lockout prevents the operator from manually injecting chemical twice during one wash cycle
- Unit can be converted in the field, so it can be triggered by either a wash controller or a laundry machine
- Special instruction sheet talks about CIP systems and wash controllers.
